

Shasta Astronomy Club Star Party

Saturday, October 13

Bumpass Hell Parking Area

Lassen Volcanic National Park is pleased to welcome the Shasta Astronomy Club for an autumn star party.

Join amateur astronomers for a tour of constellations, learn how to use the Big Dipper to find the North Star and other star groups like Cygnus the swan, Pegasus the flying horse, and many others. You'll also get to view star clusters, giant interstellar gas clouds, and maybe even a distant galaxy through several telescopes.

Viewing begins shortly after dusk, approximately 7 p.m. For all ages. Subject to weather conditions. Be sure to bring warm clothing for comfortable viewing.

Preserve your night vision by using a red flashlight, available for purchase at the Kohm Yah-mah-nee Visitor Center or the Loomis Museum
